

- Convert each of the following angles given in degrees, to radians. Give your answers correct to 2 decimal places.  
a)  $32^\circ$ , b)  $95^\circ$ , c)  $217^\circ$ .
- Convert each of the following angles given in radians, to degrees. Give your answers correct to 2 decimal places.  
a) 3 rad, b) 2.4 rad, c) 1 rad.
- Without a calculator, convert the angles from radians, to degrees. a)  $\pi/15$  b)  $\pi/5$
- Convert the following angles given in degrees, to radians. Do not use a calculator and give your answers as multiples of  $\pi$ .  
a)  $90^\circ$ , b)  $72^\circ$ , c)  $45^\circ$ .
- Determine the angle (in radians) subtended at the centre of a circle of radius 3cm by each of the following arcs:  
a) arc length 6 cm b) arc length  $3\pi$  cm c) arc length 1.5
- A sector of area  $12\text{cm}^2$  has a radius of 4.2cm. Find the size of the angle in degrees.
- The area of a segment is  $20\text{cm}^2$  and the angle subtended by the chord forming the segment is 1.3 radians. What is the radius of the circle?
- Consider the following diagram.

- Find  $\theta$
- Find the area of the sector created by  $\theta$

- Use the diagram below to answer the questions.

Find (a) the angle  $\theta$ , (b) the area of sector OAB, (c) the area of the minor segment (shaded).

- A sector of a circle has a centre C and an arc AB. The arc PQ of a smaller circle, centre C, cuts off the shared area in the sector as shown in the diagram.

If  $PC=CQ=4\text{cm}$ ,  $AP=BQ=x\text{ cm}$  and  $\theta = \frac{\pi}{3}$ , show that the area of the shape ABQP is given by  $\frac{\pi x}{6}(x + 8)\text{cm}^2$

- A sector of a circle has centre C and arc AB. Point P is on the radius AC, where  $AP=3\text{cm}$  and  $PC=5\text{cm}$ . There is a point Q on radius BC such that  $BQ=3\text{cm}$  and  $QC=5\text{cm}$ . Angle  $ACB=40^\circ$ . Find the area of APQB.

- A circle centre C is divided into 2 sectors by radii CA and CB. The ratio of the area of the minor sector to the major sector is 1:p and the minor sector angle is  $\theta$  radians. Show that  $\theta = \frac{2\pi}{p+1}$
